Initial Hypothesis

Initial hypothesis: emerging fashion brands would join a curated marketplace because it would track traffic, improve visibility, and connect them to new buyers.

Evidence gathered during the program

KEY LEARNINGS

- Brands already generate demand via pop-ups, Instagram, and community sales.
- The repeated pain is scaling sell-through, not generic visibility.
- Pop-ups are valuable but capped by calendar, geography, and capacity.
- Many products never make it onto websites, so demand is hard to extend.

MVES RUN + METRIC

Run: brand/customer discovery, popup conversations, LATAM/Hispanic brand interviews.

Metric: repeated pain frequency, channel reliance, workflow friction, urgency.

Next MVE: cross-channel publishing + post-pop-up storefronts; measure time saved, products posted, QR scans, leads, sales.

INTERVIEWS CONDUCTED

- 80+ interviews
- ~5 brands surveyed initially for PMF signals and pilot partnerships
- Additional interviews at pop-ups with independent, Hispanic community, and LATAM brands.

STILL MISSING CLARITY ON

- Will brands repeatedly use a product-led workflow tool?
- Which pain is most urgent: cross-channel posting or post-pop-up selling?
- What uplift counts as valuable: time saved, leads, revenue, or sell-through?
- How should this be priced?

Hypothesis

Current hypothesis: brands will use Bhoomi to publish products once and extend pop-up sales because it improves existing demand workflows.

From marketplace-first → brand-operations-first

BEFORE
Track traffic + marketplace
→ needs buyers and brands on day 0

NOW
Improve workflows brands already use
→ prove value before traffic

MVE workflow to test

Upload once → **Publish everywhere** → **Pop-up QR storefront** → **Track leads/sales**

What changed?

We moved from a marketplace-first idea to a brand-first MVE.

Customer discovery showed the core pain is sell-through and scaling beyond pop-ups instead of simply traffic tracking.

The MVE now improves workflows brands already have, instead of making Bhoomi responsible for creating all demand upfront.

DECISION

Pivoting / continuing to test because the strongest path is to prove brand-side value before opening the marketplace to buyers.

QUALITATIVE DATA TO SUPPORT THE DECISION

- Pop-ups drive sales, but are capped by weekends, geography, and booth capacity.
- Products often stay offline, so buyers cannot purchase after discovery.
- LATAM/Hispanic brands want US scale but face discovery and distribution barriers.
- Test: posted inventory, QR scans, saves/leads, post-pop-up sales, sell-through.
